

GradeSense Assessment - Answer Sheet

Name: Ananya Sharma Roll No. 24-1187 Class X - Section B

Total marks: 15

Answer 1. (Science)

A simple electric circuit is a closed path which allows the current to flow through it. The battery is the source of energy and it provides the potential difference which pushes the current around the loop. The switch is used to open and close the circuit. When the switch is closed the path is complete and current flows through the bulb and the resistor, and when the switch is open the path is broken so no current can flow.

In my circuit the battery, the switch, the resistor, the bulb and the ammeter are all joined one after the other in series. The ammeter is connected in series because it has to measure the current that is passing through the circuit. ¹ The voltmeter is also connected in series, just after the bulb, so that it can measure the voltage of the bulb.

The current comes out from the positive terminal of the battery, goes through all the components of the outside circuit and returns back into the negative terminal.

The resistance decides how much current will flow in the circuit. ² If we increase the resistance then the current also increases, because a bigger resistor pushes more current through the wire. This is the reason a rheostat is used when we want to make the bulb glow brighter.

Answer 2. (English)

⁴ today's world technology has made information very easy to get. Anything a student ⁵ wants to know is available on the internet within a few seconds. I believe that technology is making students more dependent on ready-made answers instead of making them better learners.

Earlier a student had to read the whole chapter and think about the question properly before writing the answer. Now most students simply search the question on their phone and copy the first answer that comes. Because of this they finish their homework very fast but they do not remember anything ⁷

after a few days. For example, many students now use a calculator even for very small sums, and later they cannot do a simple multiplication in their head. Some people say that technology is good because it gives more information.

Therefore technology is a very useful thing for students and it definitely makes them better learners, so every student should use it as much as possible.

Answer 3. (Economics)

The table shows how much quantity is demanded and how much is supplied at each different price. I have drawn the graph below by taking price on the horizontal axis and quantity on the vertical axis.

The demand curve slopes downward because when the price is low the buyers want to buy a larger quantity, and the supply curve slopes upward because the sellers are willing to sell more when the price is high. The two lines cut each other at the price of Rs. 30 and the quantity of 60 units. This is the equilibrium point of the market, because at this price the quantity demanded is exactly equal to the quantity supplied.

9 If the price in the market goes above the equilibrium price then there will be a shortage in the market, because the buyers will demand much more than what the sellers are ready to supply. In the same way, if the price falls below the equilibrium price there will be a surplus of goods lying unsold with the sellers.

If the cost of production increases then the producers will not be able to supply the same quantity at the old price, so the supply curve shifts to the left. 10 The new equilibrium will then be at a higher price and also at a higher quantity, because when the price has gone up the sellers will sell more.

Examiner report

6.5 / 15 marks - confidence 54% - graded by mock (lexical-rubric-matcher-v1)

Run bc0f01af-763b-4604-b516-537be253864f - 9/1/2026, 8:36:35 AM

FLAGGED FOR HUMAN REVIEW

- Overall confidence is 54%, below the 55% threshold for an unreviewed result.
- 2 rubric point(s) were awarded marks with weak support: q2.c3, q2.c5.
- 2 rubric point(s) were scored zero on weak evidence: q2.c2, q2.c4.

Question 1 (Science) - 3 / 5

1/1 CORRECT Correctly represents the main circuit with battery, switch, bulb and resistor connected in a closed series path

evidence: "In my circuit the battery, the switch, the resistor, the bulb and the ammeter are all joined one after the other in series."

The answer covers this rubric point.

0/1 INCORRECT Correct placement of ammeter in series and voltmeter in parallel across the bulb

evidence: "The voltmeter is also connected in series, just after the bulb, so that it can measure the voltage of the bulb."

The answer says the opposite of the marking scheme about "voltmeter" (series/parallel).

should say: A full-credit diagram should visually represent something equivalent to: - Battery - Switch - Resistor - Bulb - Ammeter in series - Voltmeter in parallel across the bulb - Connecting wires forming a complete circuit - Appropriate component labels - Conventional current direction

1/1 CORRECT Correct explanation of current flow and the function of the main components

evidence: "A simple electric circuit is a closed path which allows the current to flow through it."

The answer covers this rubric point.

0/1 INCORRECT Correctly explains the relationship between resistance and current, including the relevant principle/Ohm's law

evidence: "If we increase the resistance then the current also increases, because a bigger resistor pushes more current through the wire."

The answer says the opposite of the marking scheme about "current" (increase/decrease).

should say: The amount of current flowing through the circuit depends on both the potential difference and the resistance.

1/1 CORRECT Clear, logically structured explanation with appropriate labels and current direction in the diagram

evidence: "A simple electric circuit is a closed path which allows the current to flow through it."

The answer covers this rubric point.

Question 2 (English) - 1.5 / 5

0.5/1 PARTIAL Presents a clear position on whether/how technology affects learning

evidence: "In today's world technology has made information very easy to get."

The answer touches this rubric point but does not develop it.

should say: Technology has significantly changed the way students learn because information that was once difficult to access is now available within seconds.

0/1 MISSING Provides relevant and logically developed arguments supporting the position

No wording matching this rubric point was found. The offline grader matches vocabulary, so a point made in very different words can be missed here - this zero needs checking.

should say: If a student immediately looks up the solution to every difficult question, they may complete their work but fail to develop their own reasoning and problem-solving abilities.

0.5/1 PARTIAL Recognises and meaningfully addresses an opposing viewpoint or limitation

The offline grader cannot judge this rubric point: it asks about the quality of the reasoning, not about content that can be matched by vocabulary. Provisional half mark pending review.

0/1 MISSING Uses relevant examples and demonstrates reasoning rather than merely making unsupported claims

No wording matching this rubric point was found. The offline grader matches vocabulary, so a point made in very different words can be missed here - this zero needs checking.

should say: For example, a student struggling with a difficult scientific concept can watch several different explanations until they find one that they understand.

0.5/1 PARTIAL Provides a coherent conclusion that follows from the discussion, with clear overall communication

The offline grader cannot judge this rubric point: it asks about the quality of the reasoning, not about content that can be matched by vocabulary. Provisional half mark pending review.

Question 3 (Economics) - 2 / 5

0/1 INCORRECT Correctly plots and labels the demand and supply curves, with appropriate axes and direction

evidence: "I have

drawn the graph below by taking price on the horizontal axis and quantity on the vertical axis."

The answer says the opposite of the marking scheme about "price" (horizontal/vertical).

should say: The demand and supply data can be represented on a graph with quantity on the horizontal axis and price on the vertical axis .

1/1 CORRECT Correctly identifies the equilibrium at Rs.30 and 60 units and explains why it is equilibrium

evidence: "Equilibrium (Rs. 30, 60 units)

60"

The answer covers this rubric point.

0/1 INCORRECT Correctly explains shortage below equilibrium and surplus above equilibrium

evidence: "If the price in the market goes above the equilibrium price then there will be a shortage in the market, because the buyers will demand much more than what the sellers are ready to supply."

The answer pairs "above" with "shortage"; the marking scheme pairs "below" with "shortage" and "above" with "surplus".

should say: If the market price is below the equilibrium price , quantity demanded is greater than quantity supplied.

1/1 CORRECT Correctly explains that increased production costs shift the supply curve left/upward

evidence: "If the cost of production increases then the producers will not be able to supply the same quantity at the old price, so the supply curve shifts to the left."

The answer covers this rubric point.

0/1 INCORRECT Correctly explains the resulting tendency toward a higher equilibrium price and lower equilibrium quantity, with the change represented appropriately on the graph

evidence: "The new equilibrium will then be at a higher price and also at a higher quantity, because when the price has gone up the sellers will sell more."

The answer says the opposite of the marking scheme about "quantity" (higher/lower).

should say: The new equilibrium would generally occur at a higher price and lower quantity , assuming demand remains unchanged.

Marks on the paper

1. page 1 (-1) - This reverses the series/parallel relationship for "voltmeter". Correct: A full-credit diagram should visually represent something equivalent to: - Battery - Switch - Resistor - Bulb - Ammeter in series - Voltmeter in parallel across the bulb - Connecting wires forming a complete circuit - Appropriate component labels - Conventional current direction
2. page 1 (-1) - This reverses the increase/decrease relationship for "current". Correct: The amount of current flowing through the circuit depends on both the potential difference and the resistance.
3. page 1 (-1) [placed in the margin: text not located] - No evidence found for: Provides relevant and logically developed arguments supporting the position Correct: If a student immediately looks up the solution to every difficult question, they may complete their work but fail to develop their own reasoning and problem-solving abilities.
4. page 1 (-0.5) - Develop this point further to earn the full mark. Correct: Technology has significantly changed the way students learn because information that was once difficult to access is now available within seconds.
5. page 1 (-0.5) [placed in the margin: text not located] - Needs a human examiner: Recognises and meaningfully addresses an opposing viewpoint or limitation
6. page 1 (-1) [placed in the margin: text not located] - No evidence found for: Uses relevant examples and demonstrates reasoning rather than merely making unsupported claims Correct: For example, a student struggling with a difficult scientific concept can watch several different explanations until they find one that they understand.
7. page 1 (-0.5) [placed in the margin: text not located] - Needs a human examiner: Provides a coherent conclusion that follows from the discussion, with clear overall communication
8. page 2 (-1) - This reverses the horizontal/vertical relationship for "price". Correct: The demand and supply data can be represented on a graph with quantity on the horizontal axis and price on the vertical axis .
9. page 2 (-1) - This pairs "above" with "shortage" - the marking scheme pairs "below" with "shortage" and "above" with "surplus". Correct: If the market price is below the equilibrium price , quantity demanded is greater than quantity supplied.
10. page 2 (-1) - This reverses the higher/lower relationship for "quantity". Correct: The new equilibrium would generally occur at a higher price and lower quantity , assuming demand remains unchanged.

Automatic corrections applied to the grading output

- q2.c3: 0.5 mark(s) awarded with no quote we could verify; confidence reduced

- q2.c5: 0.5 mark(s) awarded with no quote we could verify; confidence reduced
