

GradeSense Assessment - Answer Sheet

Name: Ananya Sharma Roll No. 24-1187 Class X - Section B

Total marks: 15

Answer 1. (Science)

An electric circuit is a wire. The battery stores current inside it and the current gets used up by the bulb, so nothing comes back to the battery. The switch makes the bulb brighter.

The ammeter should be connected in parallel and the voltmeter should be connected in series, because the ammeter is a bigger instrument. If the resistance is increased the current also increases.

Answer 2. (English)

Technology is a machine. Computers are used in offices and schools. Mobile phones are also technology and they are very costly nowadays. Students should study hard and respect their teachers.

Answer 3. (Economics)

Demand means what people want and supply means what shops have. The equilibrium is at Rs. 50 and 100 units because that is the biggest number in the table. If the cost of production increases the supply curve shifts to the right and the price becomes lower.
